

AssetWatch Prime™

Affiniti Cloud™

Pinnacle's Affiniti Cloud™ Solutions are applications built on a secure and stable cloud platform, architected to use web services and reusable components, HTML 5 Web apps and responsive design.

Within the Affiniti Cloud™ Solution Suite, you will find corporate level management tools and store level applications to help you as a retailer manage and operate your business, whether you are a single store operator or a multi-store chain.

AssetWatch™ and AssetWatch Prime™

Running outdated software or end-of-life hardware can be the first entry for malware and data theft. Without current security updates and encryption for the latest in virus combat, payment and store systems are vulnerable to outside intrusion and data breach. Additionally, in a multi-store environment, outside hardware and software applications can be added without corporate knowledge- bringing greater opportunity for security compromises.

AssetWatch gathers information from your Palm POS environment such as configuration, software versions, device numbers and additional device installs on a multitude of store systems- at regular and automatic intervals.

Information can be obtained on point-of-sale terminals, payment terminals, dispensers, computer systems and additional hardware and software as needed/added.

AssetWatch™ included with Palm POS™

Using the Connexus Site Asset Standard and available for PCI compliance data, AssetWatch monitors and reports POS version, pump version and configuration, pinpad version and configuration, credit server, other Pinnacle products, additional versionable products, and more.

AssetWatch data is delivered regularly to a cloud-based data repository for analysis and dissemination on a secure data connection. Retailers can use this data to determine not only version compatibility, but whether rogue devices have been inserted on the network, outage monitoring, configuration issues, versioning of components in the PII/Card data chain of custody, and software license compliance.

AssetWatch Prime™

Once AssetWatch has been installed with your Palm POS, it will deliver asset data to the AssetWatch Cloud. On a monthly basis, you will receive an email with a report containing the data collected.

Want more reporting and more control? AssetWatch Prime Delivers!

AssetWatch Prime is an optional module that extends the reporting capabilities to you by providing a web app dashboard you can access from your PC, phone, or tablet. It can be used to support store systems, report compliance data, determine whether or not systems are up and running, and software confirm updates have been completed.

If any of these challenges are familiar to you, then you NEED AssetWatch Prime

- ✓ YOU need regular software and peripheral reporting to keep current on all updates and determine new security needs in real time.
- ✓ Your vendor needs a better tool to support you and your systems. You want to call for support and instead of being asked to provide information about your POS and POS environment, you want your vendor to know.
- ✓ Your company has tasked YOU with providing reporting of assets, to avoid costly fraud activity and liability from non-compliance with regulatory agencies. You'd like to be able to deliver what they need, quickly and easily.
- ✓ You've tasked your TEAMS with monthly compliance gathering, manually collecting information on devices and serial numbers, but do you know if it's being done and is it being done correctly?

Affiniti AssetWatch and AssetWatch Prime

A proactive system that will evolve through collaboration with our clients and business partners as we consider additional elements to be captured, more reporting capabilities, alerts and notifications to help companies make critical decisions, NOW!
